                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Spleen cells from mice immunized with human IL-4 were used to prepare hybridomas, which were screened for anti-IL-4 MAb secretion. Only clone 3B9 was positive. cDNA clones of the 3B9 light and heavy chains were cloned into pGEM7f+ and transformed into B. coll DH5-alpha. The clones were sequenced (AAQ83490-91), and used for antibody engineering. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence represents the heavy chain of the murine 3B9 antibody of the invention. The antibody is a chimeric or humanised interleukin-4 (IL4) monoclonal antibody for the treatment of immunoglobulin E (1gE) mediated diseases. The antibodies are useful for the treatment of allergic disorders such as allergic rhinitis, conjunctivitis, atopic dermartisis, atopic asthma and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft versus host disease
                Antibody, interleukin-4; IL4; immunoglobulin E; IgE mediated disease; allargic disorder; allergic rhinitis; conjunctivitis; atopic dermatitis; atopic asthma; anaphylactic shock; cell proliferation regulator; therapy; autoimmune disease; graft versus host disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Recombinant IL4 antibodies useful for tratment of allergic rhinitis, atopic ashthma and anaphylactic shock.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Humanized antibody; antibody engineering; monoclonal antibody; MAb;

A humanized antibody heavy chain variable region and signal sequence is given in ARR70192. The signal sequence is also provided in ARR70193. The CDR sequences of the construct are identical to the native CDRs of mouse anti-human II-4 MAD 389 (AAR70198-200). (Updated on 25-WAR-2003 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Chimeric and humanised IL-4 monoclonal antibodies (mAbs), derived from high affinity mAbs - useful in treatment of IL-4-mediated and IgE-mediated allergic conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Chimeric antibody, antibody engineering, monoclonal antibody, MAb; interleukin-4; IL-4; allergy.

The present sequence represents the heavy chain variable region of a humanised murine interleukin-4 (IL-4) antibody 3B9. The specification describes chimeric and humanised IL-4 monoclonal antibodies. The appecification antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunoglobulin E-mediated allergic reactions e.g. allergic rhinitis, conjunctivitis, atopic asthma, anaphylactic shock, rheumatoid arthritis, versus-graft disease and renal disease. They are also useful in the diagnosis of an allergy or condition associated with excess IL-4 production through the measurement e.g. by ELISA of circulating endogenous IL-4 levels in humans
                                                                                                                                                                                                                     New DNA molecules encoding recombinant antibodies useful for treating IL4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Heavy chain variable region; interleukin-4; IL-4; antibody 3B9; chimeric antibody; humanised antibody; IL-4 mediated allergic reaction; Immunoglobulin B-mediated allergic reaction; allergic rhinitis; conjunctivitis; atopic dermatitis; atopic aethma; anaphylactic shock; rheumatoid arthritis; host-versus-graft disease; renal disease; allergy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Heavy chain variable region of murine/human chimeric antibody 3B9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A human/mouse chimeric antibody heavy chain variable region was constructed (given in AAR70191) that contained the mouse anti-human IL-4 MAD 3B9 variable region including 3 CDRS (AAR70198-200) and a human antibody signal peptide (AAR70193). The construct was used for humanized antibody production. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 27-AUG-2003 to correct OS field.)

This sequence represents the light chain of the chimeric 3B9 antibody of the invention. The antibody is a chimeric or humanised interleukin-4 (IL4) monoclonal antibody for the treatment of immunoglobulin E (IgE) mediated diseases. The antibodies are useful for the treatment of allergic disorders such as allergic rhinitis, conjunctivitis, atopic dermattisis, atopic asthma and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft versus host disease
                                                                                                                                                                                                                                                                                                                                                                                                                                      Antibody, interleukin-4; IL4; immunoglobulin E; IgE mediated disease; allergic disorder; allergic rhinitis; conjunctivitis; atopic dermatitis; atopic asthma; anaphylactic shock; cell proliferation regulator; therapy; autoimmune disease; graft versus host disease.

                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                   The present sequence represents the heavy chain variable region of murine/human interleukin-4 (IL-4) chimeric antibody 3B9. The specification describes chimeric and humanised IL-4 monoclonal antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunoglobulin E-mediated allergic reactions e.g. allergic thinitis, conjunctivitis, atopic astumia, anaphylactic shock, rheumatoid arthitis, host-versus-graft disease and renal disease. They are also useful in the diagnosis of an allergy or condition associated with excess IL-4 production through the measurement e.g. by ELISA of circulating endagenous IL-4 levels in humans. This sequence represents the heavy chain of the humanised 389 antibody of the invention. The antibody is a chimeric or humanised interleukin-4 (IL4) monoclonal antibody for the treatment of immunoglobulin E (IgE) mediated diseases. The antibodies are useful for the treatment of allergic disorders such as allergic rhinitis, conjunctivitis, atopic demarkitis, atopic asthma and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft versus host disease

The invention is useful for preventing or treating an amyloidogenic disease or Alzheimer's disease in a patient. The invention is also useful for in vivo imaging amyloid deposits in a patient. The present amino acid sequence represents a mouse 3D6/10D5 variable light (VL) chain or

```
The invention relates to a novel humanised immunoglobulin light or heavy chain. The humanised immunoglobulin light or heavy chain comprises:

variable region complementarity determining regions (CDR's) from the 3D6 immunoglobulin light chain variable region sequence of 132 amino acids fully defined in the specification (ADR88406), or heavy chain variable region sequence of 131 amino acids fully defined in the specification (ADR88408), or from the 10D5 immunoglobulin light chain variable region sequence of 131 amino acids given in the specification (ADR88418) or heavy chain variable region sequence of 142 amino acids fully defined in the specification (ADR88420); and a variable framework region from a human acceptor immunoglobulin light or heavy chain sequence, provided that a least one framework residue is a residue that confromed antigen directly, a residue adjacent to a CDR, a conceptor immunoglobulin light or heavy chain sequence, where the framework residue is a residue that confromation and incerly, a residue adjacent to a CDR, a CDR interacting residue or a residue participating in the VL-VH interface.

An antibody of the invention has neuroprotective and moctropic activity, a for and may have a use in gene therapy. The composition and methods are not a for a form a for a form of the for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         useful for preventing or treating an amyloidogenic disease, such as Alzheimer's disease. The variable region sequence is useful in producing a three-dimensional image of a 356 or 1005 immunoglobulin, immunoglobulin chain, or its domain. The present sequence represents the murine 1005 immunoglobulin heavy chain variable region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ;

treating an amyloid antibodies mentioned, (ix) a method of diagnosing or treating an amyloid related condition in a cell, tissue, organ or animal, comprising or administering a composition comprising or last least come of the antibodies mentioned, with, or to, the cell, tissue, organ or animal, (x) a medical device comprising at least one amyloid antibody an exticle of manufacture for human plaramentical and antibody, (xi) an article of manufacture for human plaramentical or diagnostic use, comprising packaging material and a container comprising a solution or a lyophilized form of at least one of the amyloid antibodies mentioned, and (xii) a method of producing at clast one of the isolated mammalian amyloid antibodies, comprising providing a host cell or transgenic animal or transgenic plant or plant compositions of the present invention are useful for cell capable of expressing the antibody in recoverable amounts. The producing therapeutic compositions and devices for treating amyloid associated disorders, such as Alzheimer's disease, cancer, allergies, allowing a host call or present invention are useful for present invention are useful for present and devices for treating amyloid associated disorders, such as Alzheimer's disease, cancer, allergies, allowing and antibody antibody and antibody and antibody and antibody antibody and a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is the protein sequence of the heavy chain of a humanised antibody of the present invention. In the variable portion, the complementarity determining regions (CDRs) originate from murine monoclonal antibody 10D5 and the framework region originates from human germline VH segment DP-28 and 3 segment JH4. Novel humanised antibodies of the invention have CDRs from 10D5 and human framework sequences. These humanised antibodies have binding affinities (affinity and epitope location) approximately the same as those of the mouse 10D5 antibody. The invention includes antibodies, single chain antibodies, and their fragments, as well as nucleotide sequences, vectors, transformed host

new blood vessel growth, angiogenesis, inhibition of which is an approach to limiting tumour growth, angiogenesis, inhibition of which is an approach therapeutics with a cytostatic activity as a collagen agonist or antagonist. The invention is useful for diagnosing and treating disorders associated with angiogenesis, tumour growth and/or cancer metastasis. The present sequence is the amino acid sequence of a mutant mouse anti-cryptic collagen site antibody HUI77 variable region heavy chain CBM which may be used during the creation of an antibody of the invention.

cryptic collagen epitope. The growth of all solid tumours requires

```
the present sequence is the protein sequence of the heavy chain of a humanised antibody of the present invention. In the variable portion, the complementarity determining regions (CDRs) originate from murine monoclonal antibody 1005 and the framework region originates from human germline VH segment DP-28 and J segment JH4. Novel humanised antibodies of the invention have CDRs from 1005 and human framework sequences. These humanised antibodies have binding affinities (affinity and epitope location) approximately the same as those of the mouse 1005 antibody. The invention includes antibodies, single chain antibodies, and their invention includes antibodies, single chain antibodies, and their calls, and methods of using the humanised antibody to treat, prevent, alleviate, reverse or otherwise ameliorate symptoms and/or pathology associated with Down's syndrome, (pre-)clinical Alzheimer's disease or (pre-)clinical cerebral amyloid anglopathy, and to inhibit formation or reduce Abeta plaque in the brain. conter herbicide resistance activity. Crop plants, such as soybean, cotton, tobacco, sugarbeet, oilseed rape, canola, flax, sunflower, potato, tomato, alfalfa, lettuce, maize, wheat, sorghum, rye, bananas, barley, oat, turf grass, forage grass, sugar cane, pea, field bean, rice, pine, poplar, apple, grape, citrus or nut plants, transformed with a pine, poplar, apple, grape, citrus or nut plants, transformed with a cerbicide binding protein gene are resistant to the herbicide. Hence, weeds can be selectively controlled in a field of the transformed crops. The plants are substantially resistant or tolerant to herbicides, such as paraquat or diquat, that inhibit photosynthesis by accepting electrons from photosystem i thus generating free radicals which cause lipid proteins advantageously sequester the herbicide, e.g. at the cell surface or in the vacuoles of a treated plant. Sequestration at the cell surface prevents the entry of the herbicide into the cell so that the herbicide cannot reach its intracellular target and exert any significant cytotoxic effect. The herbicide binding protein inhibits the
                                                                                                                                                                                                                                ö

This invention relates to a novel grafted antibody or its functional fragment comprising one or more complementarity determining regions (CDRs) of a defined light CDR and a heavy CDR with at least one amino acid (aa) substitution where the antibody has specific binding activity

determining regions, useful for diagnosing and treating disorders associated with angiogenesis, tumor growth and/or cancer metastasis.

Claim 24; SEQ ID NO 91; 232pp; English.

New cryptic collagen antibody with one or more complementarity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          d
                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to humanized immunoglobulin (Ig) light or heavy chains comprising variable region complementary determining regions (CDRs) from the 1284 Ig variable region sequence and variable framework regions from a human acceptor Ig light chain or heavy chain sequence. The humanized Ig light or heavy chain or its nucleic acid molecule is useful for preventing or treating an amyloidogenic disease in humans, associated with amyloid deposits of Abeta in the brain, e.g., Alzheimer's disease, Down's syndrome or mild cognitive impairment, all characterized by cognitive impairment. The variable region sequence is useful in producing a three-dimensional image of a 1284 Ig, 1284 Ig chain or its domain. A humanized antibody is useful for reducing plaque or neuritic burden in a subject. The present sequence represents a mouse 1284 antibody variable
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New humanized immunoglobulin light or heavy chains comprising variable region complementary determining regions and variable framework regions, useful for preventing or treating e.g., Alzheimer's disease.
mobility of the herbicide from the application site to the whole plant preventing the herbicide reaching particularly sensitive organs. Additionally, tolerant plants can be produced against herbicides that have more than one target site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Immunoglobulin; Ig; neuroprotective; nootropic; gene therapy; vaccine; amyloidogenic disease; antibody.

The invention relates to humanized immunoglobulin (Ig) light or heavy chains comprising variable region complementary determining regions (CDRs) from the 1284 Ig variable region sequence and variable framework regions from the 1284 Ig variable region sequence and variable framework regions from a human acceptor Ig light chain or heavy chain sequence. The humanized Ig light or heavy chain or its nucleic acid molecule is useful for preventing or treating an amyloidogenic disease in humans, associated with amyloid deposits of Abeta in the brain, e.g., Alzheimer's disease, Down's syndrome or mild cognitive impairment, all characterized by a three-dimensional image of a 1284 Ig, 1284 Ig chain or its domain. A humanized antibody is useful for reducing plaque or neuritic burden in a subject. The present sequence represents the humanised 1284VHV1 mature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New humanized immunoglobulin light or heavy chains comprising variable region complementary determining regions and variable framework regions, useful for preventing or treating e.g., Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                     Immunoglobulin; Ig; neuroprotective; nootropic; gene therapy; vaccine; amyloidogenic disease; antibody; 12B4v1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                  The invention relates to humanized immunoglobulin (Ig) light or heavy chains comprising variable region complementary determining regions (CDRs) from the 12B4 Ig variable region sequence and variable framework regions from a human acceptor Ig light chain or heavy chain sequence. The humanized Ig light or heavy chain or its nucleic acid molecule is useful for preventing or treating an amyloidogenic disease in humans, associated with amyloid deposits of Abeta in the brain, e.g., Alzheimer's disease, Down's syndrome or mild cognitive impairment, e.g., Alzheimer's disease, Down's syndrome or mild cognitive impairment, all characterized by a three-dimensional image of a 12B4 Ig, 12B4 Ig chain or its domain. A humanized antibody is useful for reducing plaque or neuritic burden in a subject. The present sequence represents the humanised 12B4VHv1 sequence
                                                                                                                                                                                                                                     New humanized immunoglobulin light or heavy chains comprising variable region complementary determining regions and variable framework regions, useful for preventing or treating e.g., Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Immunoglobulin, Ig; neuroprotective; nootropic; gene therapy; vaccine; amyloidogenic disease; antibody.

The invention relates to humanized immunoglobulin (Ig) light or heavy chains comprising variable region complementary determining regions (CDRs) from the 1284 Ig variable region sequence and variable framework regions from the 1284 Ig variable regions sequence and variable framework regions from a human acceptor Ig light-chain or heavy chain sequence. The humanized Ig light or heavy chain or its nucleic acid molecule is useful for preventing or treating an amyloidogenic disease in humans, associated with amyloid deposits of Abeta in the brain, e.g., Alzheimer's disease, Down's syndrome or mild cognitive impairment, all characterized by a three-dimensional image of a 1284 Ig, 1284 Ig chain or its domain. A humanized antibody is useful for reducing plaque or neuritic burden in a subject. The present sequence represents a mouse 1284 antibody variable
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New humanized immunoglobulin light or heavy chains comprising variable region complementary determining regions and variable framework regions, useful for preventing or treating e.g., Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Immunoglobulin; Ig; neuroprotective; nootropic; gene therapy; vaccine; amyloidogenic disease; antibody; 12B4; chimeric.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

The invention relates to a novel enterohaemorragic Escherichia coli 0157:H7-specific nucleic acid molecule. A polynucleotide of the invention has anti-bacterial activity. The polypeptide can be used in detection and/or treatment of 057:H7 infection. The nucleotide sequence of the genome of Enterchaemorragic E coli 0157:H7 was determined. The present sequence represents an E. coli 0157:H7-specific polypeptide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel anti-human interleukin (IL)-18 rodent neutralizing monoclonal antibody having high affinity and useful for treating IL-18 mediated disorders such as multiple sclerosis, rheumatoid arthritis and psoriasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  mouse antibody 1369 heavy chain variable region. The antibody has high affinity for human interleukin-18 (IL-18) and is useful for treating and diagnosing IL-18-mediated disorders, e.g. autoimmune diseases such as "multiple sclerosis, rheumatoid arthritis, type I or insulin dependent diabetes, inflammatory bowel disease and psoriasis. Specific changes can be introduced into the nucleotide sequences encoding the complementarity determining regions (CDRs) or framework regions of the variable light chain and heavy chain peptides. The resulting modified or fusion nucleic acid sequences can then be introduced into a plasmid for expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   neuroprotective;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to humanized immunoglobulin (Ig) light or heavy chains comprising variable region complementary determining regions (CDRs) from the 12B4 Ig variable region sequence and variable framework regions from a human acceptor Ig light chain or heavy chain sequence. The humanized Ig light or heavy chain or its nucleic acid molecule is useful for preventing or treating an amyloidogenic disease in humans, associated with amyloid deposits of Abera in the brain, e.g., Alzheimer's disease, bown's syndrome or mild cognitive impairment, all characterized by cognitive impairment, all characterized by a three-dimensional image of a 12B4 Ig, 12B4 Ig chain or its domain. A humanized antibody is useful for reducing plaque or neuritic burden in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Enterohemorragic Escherichia coli 0157:H7-specific nucleic acid molecule and a polypeptide and its use, a polypeptide, a vector and a host cell.
                                                                                                                                                                                                                                                                                                     New humanized immunoglobulin light or heavy chains comprising variable region complementary determining regions and variable framework regions, useful for preventing or treating e.g., Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Enterohaemorragic E. coli 0157:H7-specific protein SEQ ID NO: 327.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   subject.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention relates to a novel grafted antibody or its functional fragment comprising one or more complementarity determining regions (CDRs) of a defined light CDR and a heavy CDR with at least one amino acid (aa) substitution where the antibody has specific binding activity for a cryptic collagen epitope. The growth of all solid tumours requires new blood vessel growth, angiogenesis, inhibition of which is an approach to limiting tumour growth. The invention may allow development of therapeutics with a cytostatic activity as a collagen agonist or antagonist. The invention is useful for diagnosing and treating disorders associated with angiogenesis, tumour growth and/or cancer metastasis. The present sequence is the amino acid sequence of a mutant mouse anti-cryptic collagen site antibody HU177 variable region heavy chain CDR which may be used during the creation of an antibody of the invention.
                                                                                                                                                                                                                                               grafted antibody; complementarity determining region; CDR; light CDR; heavy CDR; cryptic collagen epitope; solid tumour; new blood vessel growth; angiogenesis; tumour growth; cytostatic; collagen agonist; collagen anti-cryptic collagen anti-cryptic wariable region heavy chain; mouse; murine;

The growth of all solid tumours requires new blood vessel growth, angiogenesis, inhibition of which is an approach to limiting tumour growth. The invention may allow development of therapeutics with a cytostatic activity as a collagen agonist or antagonist. The invention is useful for diagnosing and treating disorders associated with angiogenesis, tumour growth and/or cancer metastasis. The present sequence is the partial amino acid sequence of a mouse anticryptic collagen site antibody Hull77 variable region heavy chain CDR which is related to the invention.
grafted antibody, complementarity determining region, CDR; light CDR; heavy CDR; cryptic collagen epitope; solid tumour; new blood vessel growth; angiogenesis; tumour growth; cytostatic; collagen agonist; cancer metastasis; anti-cryptic collagen; antiabody; HU177; variable region heavy chain; mouse; murine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New cryptic collagen antibody with one or more complementarity determining regions, useful for diagnosing and treating disorders associated with angiogenesis, tumor growth and/or cancer metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         fragment comprising one or more complementarity determining regions cides of a defined light CDR and a heavy CDR with at least one amino acid (as) substitution where the antibody has specific binding activity for a cryptic collagen epitope. The growth of all solid tumours requires new blood vessel growth, angiogenesis, inhibition of which is an approach to limiting tumour growth. The invention may allow development of therapeutics with a cytostatic activity as a collagen agonist or antagonist. The invention is useful for diagnosing and treating disorders associated with angiogenesis, tumour growth and/or cancer metastasis. The present sequence is the amino acid sequence of a mutant mouse anti-cryptic collagen site antibody HU177 variable region heavy chain CDR which may be used during the creation of an antibody of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RESULT 43
```

```
The invention relates to methods of screening for antibodies or other agents which selectively bind to the pro-inflammatory cytokine interleukin-1 [IL-1R form an antagonist complex which can still bind to IL-1R interpret in [IL-1R] but which cannot activate it. The agents identified using the methods act by blocking the recruitment of the IL-1 creeptor accessory protein (IL-1RAP) by the IL-1/IL-1R1 complex, consensing method of the invention involves detecting the binding of IL-18 pha or IL-19 and thereby reducing inflammatory responses. One screening method of the invention involves detecting the binding of IL-1RAP in the presence of a test agent, detecting IL-1R but which decreases IL-1 activity. A second method involves detecting the binding of IL-1RAP to IL-1R1 in the presence of involves detecting the binding of IL-1RAP to IL-1R1. In the presence of IL-18 pha or IL-18 pha
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 framework regions derived from the human germline gamma heavy chain variable region 2-70 (ADS47747) and the human heavy chain joining region JH4 (ADS47749). The present sequence represents the human germline gamma VH 2-70 used in the design of the humanized MAB201 VH.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Protein sequences (AAR66295-51) are novel human immunoglobulin heavy chain sequences encoded by novel isolated genes. The genes (AAQ78939-7902) were isolated and cloned from a series of cosmid constructs: Y202; Y103; Y21; Y6;Y24; 3-31; M84; M118 and M31, by PCR amplification using primers AAQ78917-38. The genes are subdivided into 5 families of Vh genes. The fragments cover a region of 800 kb. The DNA fragments were isolated from high molecular weight DNA from human placenta. The DNA was separated by gel elecrophoresis and 35-45 kb fractions were collected. The fragments were ligated with Clai-digested cosmid vector puBB1. The ligation products were in vitro packed and infected into E.coli 490A. The tragments were then subcloned by colony phybridisation. The Viragments were collected the DNA fragments were then subcloned by colony phybridisation. The Viragments were then subcloned by colony phybridisation. The Viragments encoding them are useful in producing human mammalian hosts. (Updated on 25-MAR-2003 to correct PN

The present invention describes an anti-CD16A antibody (I) comprising a VH domain comprising complementarity determining regions (CDRs) derived from the mouse 308 antibody value to an via derived from the mouse 308 antibody light chain or a humanised anti-CD16A antibody (II) that lacks effector function and comprises all six CDRs of antibody (II) that lacks effector function and comprises all six CDRs of antibody 3038. Also described is a method (MI) for reducting a deleterious immune response in a mammal in need of such reduction, which involves administering to the mammal a CD16A binding protein comprising a FC ceffector ligand (II) and (II) have haemostatic, antirheumatic, antiantanic, dermatological immunosuppressive, antiinflammatory, antiantanic, ophthalmological and antiasthmatic activities. (I) or (II) is useful for reducting a deleterious immune response in a mammal which involves administering to the mammal (I) or (II). The deleterious immune response in a mammal which involves administering to the mammal (I) or (II). The deleterious immune response in a nammal which involves administering to the mammal (I) or (II). The deleterious immune response in a mammal which involves administering to the mammal (I) or (II). The deleterious immune response in a mammal which involves administering to the mammal (I) or (II). The deleterious immune response in a mammal which including the presence caused by autoimmune disease such as idiopathic thrombocytopenic purpura (ITP), rheumatoid arthritis (RA), celecroderma, autoantibody trigged utricaria, pemphydus, vasculitis syndrome, manned manned purpare consist (RS), poorlatic arthritis, syndrome, manned purpare consist of perfect arthritis, syndrome, manned purpare consisting and deleterious dele
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Reiter's syndrome, Kowasaki's disease, polymyositis and dermatomyositis and also for treating diseases susceptible to treatment with intravenous immunoglobulin (IVIG) therapy e.g., allergic asthma. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel anti-CD16A antibody comprising complementarity determining regions derived from mouse 3G8 antibody and humanized anti-CD16A antibody that lacks effector function, useful for treating deleterious immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

This is the amino acid sequence of the mature peptide from the murine anti-protein C monoclonal antibody HPC-4 heavy chain variable region. HPC-4 recognises the activation peptide region (AARSB106) of the heavy chain of protein C, a vitamin K-dependent plasma protein zymogen. Protein C is converted to activated protein C (APC) by cleavage between the Arg-Leu amino acid contained within the activation peptide sequence. HPC-4 prevents protein C activation to APC by binding to this region. The DNA sequences encoding the variable regions of the heavy and light chains of the antibody (AATO$299-302) were used to construct humanised antibodies using the PCR primers AATO$303-9. The humanised antibodies are useful as inhibitors of coagulation and can be used for the treatment of tumours by inhibiting the anticoagulant activity of APC by preventing conversion of
and also for treating diseases susceptible to treatment with intravenous immunoglobulin (IVIG) therapy e.g., allergic asthma. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Epitope, activation, heavy chain, protein C, vitamin K, plasma protein, zymogen, cleavage, mouse, humanised antibody, variable region, light chain, inhibition, anticoagulant, coagulation, tumour.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present libration describes an anti-CLDAA antibody (1) compprising a derived from the mouse 3G8 antibody heavy chain and a VL domain comprising CDRS derived from the mouse 3G8 antibody that and a VL domain comprising CDRS cerived from the mouse 3G8 antibody libration or a humanised anti-CD16A antibody (II) that lacks effector function and comprises all six CDRs of mouse antibody 3G8. Also described is a method (MI) for reducing a CG deleterious immune response in a mammal in need of such reduction, which involves administering to the mammal a CD16A binding protein comprising an Fc region derived from a human 1gG heavy chain, where the Fc region conversed from a human 1gG heavy chain, where the Fc region are reference function or is modified to reduce binding to an Fc effector ligand. (I) and (II) have haemostatic, antirhelwantic, antiarthritic, dermatological immunosuppressive, antiinflammatory, converted for antianaemic, vasotropic, nephrotropic, neuroprotective, antipsoriatic, curopathic, ophthalmological and antiasthmatic activities. (I) or (II) is useful for reducing a deleterious immune response in a mammal which involves administering to the mammal (I) or (II). The deleterious immune response is an inflammatory response caused by autoimmune disease such as inflammatory response caused by autoimmune disease such as inflammatory response caused by autoimmune disease such as diappathic thrombocytopenic purpura (ITP), rheumatoid arthritis (RA), systemic lupus erythematosus (SLE), autoimmune haemolytic anaemia (AHA), systemic lupus erythematosus (SLE), autoimmune haemolytic anaemia (AHA), systemic vasculitis, ankylosing spondylitis, Sjogren's syndrome, Systemic arthritis, ankylosing spondylitis, Sjogren's syndrome, Reiter's syndrome, Rowasaki's disease, polymyositis and dermatomyositis
                                                                                                                                                                                                                                                                                                                                         anti-CD16A antibody; mouse; 3G8 antibody; humanised anti-CD16A antibody; dermatological; laminosupressive; antiinflammatory; antianaemic; vasotropics; laminosupressive; antiinflammatory; antianaemic; vasotropic; nephrotropic; neuroprotective; antipsoriatic; uropathic; ophthalmological; antiasthmatic; inflammatory response; autoimmune disease; idiopathic thrombocytopenic purpura; rheumatoid arthritis; systemic lupus erythematosus; autoimmune haemolytic anaemia; scleroderma; autoimmune haemolytic anaemia; scleroderma; systemic autoimmune haemolytic anaemia; scleroderma; psystemic vasculitis; Goodpasture's syndrome; psoriatic arthritis; ankylosing spondylitis; Sjogren's syndrome; Reiter's syndrome; Kowasaki's disease; polymyositis; dermatomyositis; allergic asthma.

selective binding agent that binds to IL-lalpha or IL-lbeta, such that the complex binds to IL-1 receptor without activating the receptor. Treating interleukin-1 mediated disease, by administering an IL-1

Example 2; Fig 6B; 39pp; English.

The invention relates to treating interleukin-1 (IL-1)-mediated disease, or blocking IL-lalpha and IL-lbeta from binding to the IL-1 receptor, involving administering an IL-1 selective binding agent (e.g. a humanised mouse anti-IL-1 antibody) that is capable of binding to IL-1 alpha or IL-1 betain where the selective binding agent-II-1 complex is capable of binding to IL-1 alpha or IL-1 chocking formation of IL-lbeta/IL-1 receptor/IL-1RacP complex were of mouse, chimaeric and humanised monoclonal antibody (MAD) 201 in chocking formation of IL-lbeta/IL-1 receptor/IL-1RacP complex were studied. The results showed that anti-IL-lbeta antibody MAD201 is the const effective inhibitor of IL-lbeta antibody MAD201 is the most effective inhibitor of IL-lbeta signalling. The method is useful for treating IL-1-mediated disease e.g. acute pancreatitis, amyotrophic lateral sclerosis (ALS), Alzheimer's disease, cachexia, anorexia, asthma, pulmonary diseases, atherosclerosis, autoimmune vasculitis, chronic farigue syndrome, Clostridium associated illness, coronary conditions (e.g. congestive heart failure, coronary restenosis, myocardial candometriosis, fever, ibromyalgia, hyperalgesia, cancers, diabetes, endometriosis, fever, ibromyalgia, hyperalgesia, cancers, diabetes, endometriosis, fever, ibromyalgia, hyperalgesia, conformatic arthritis and rheumatory conditions (e.g. congeriatic arthritis and rheumatory conditions (alsease) (arthritis), inflammatory physis springer, learning impairment, lung diseases (adult respiratory equisease, cancerm labour, conditions (ARDS)), multiple sclerosis, myopathies, neurocoxicity, osteoporosis, panin, Parkinson s disease, periodontal disease, preterm labour, periodon injury, septic shock, side effects from radiation

ö therapy, temporal mandibular joint disease, sleep disturbance, uveitis and inflammatory conditions resulting from strain, sprain, cartilage damage, trauma, orthopaedic surgery and infection. The present sequence is a human gremline variable region used to determine which residues or CDRs required to be changed in mouse anti-IL-1 monoclonal antibody MAB201 in order to humanise it or make it into a chimaeric molecule with human CDR (complementarity determining region) sequences Mouse, interleukin-1; IL-1 alpha; IL-1 beta; acute pancreatitis; ALS; amyotrophic lateral sclerosis; Alzheimer's disease; cachaxia; anorexia; asthma; pulmonary disease; atherosclerosis; autoimmune vasculitis; chronic fatigue syndrome; coronary condition; congestive heart failure; cancer; diabetes; endometriosis; fever; glomerulonephritis; ARDS; graft versus host disease; haemorrhagic shock; inflammatory condition; inflammatory bowel disease; osteoarthritis; rheumatoid arthritis; inflammatory bowel disease; osteoarthritis; theumatoid arthritis; schaemia; stroke; lung disease; adult respiratory distress syndrome; multiple sclerosis; pain; Parkinson's disease; psoriasis; septic shock; reperfusion injury; sleep disturbance; uveitis; infection; antibody; Gaps ö Length 120; 0; Indels 88.2%; Score 30; DB 6; Le 100.0%; Pred. Bhaskar V; Dubridge R, Wang Q, Law D,

WPI; 2004-525780/50. N-PSDB; ADQ09619. New antibody that inhibits binding of a GPR64 polypeptide to an antibody comprising GPR64-18, GPR64-81, GPR64-93 or GPR64-101, useful in preparing a composition for diagnosing or treating ovarian cancer. Example 2; SEQ ID NO 15; 75pp; English. This invention relates to novel antibodies that bind to the G protein coupled receptor protein identified as GPR64, namely GPR64-1, GPR64-16, GPR64-18, GPR64-20 and GPR64-48. Specifically, it refers to the use of

expressing tumour cells such as those associated with ovarian cancer, uterine cancer and Bwing's sarcoma. The present invention describes epitope mapping of those antibodies that show high affinity binding to GPR64 through competitive binding analyses, such that the antibodies can be assessed for GPR64 dependent cell death in vitro. Accordingly, they can be used to develop cytostatic compositions for gene therapy or immunotherapy that inhibit cellular proliferation of an ovarian cancerous cell and furthermore can diagnose and inhibit growth of tumour cells. This polypeptide is encoded by a heavy chain variable region DNA sequence of a murine anti-human GPR64 antibody of the invention. these anti-GPR64 antibodies as selective cytotoxic agents against GPR64

RESULT 15
AG0585
citrate utilization protein B [imported] - Salmonella enterica subsp. enterica subsp. citrate utilization protein B [imported] - Salmonella enterica serovar Typhi
C;Species: Salmonella enterica subsp. enterica serovar Typhi
A;Note: this species has also been called Salmonella typhi
C;Date: 09-Nov-2001 #sequence_revision 09-Nov-2001 #text_change 18-Nov-2002
C;Accession: AG0585
R;Parkhill, J; Dougan, G; James, K.D; Thomson, N.R.; Pickard, D.; Wain, J; Churcher, th, T.; Connerton, P.; Cronnin, A.; Davis, P.; Davies, R.M.; Dowd, L.; Waite, N.; Farrar, S.; Moule, S; O'Gacra, P.
Nature 413, 848-852, 2001
A;Authors: Parry, C.; Quail, M.; Rutherford, K.; Simmonds, M.; Skelton, J.; Stevens, K.; A;Title: Complete genome sequence of a multiple drug resistant Salmonella enterica serov A;Reference number: AB0502; MUID:21534947; PMID:11677608
A;Acteus: preliminary
A;Molecule type: DNA
A;References: UNIPARC:UPI00005A149; GB:AL513382; PIDN:CAD05153.1; PID:g16501926;
C;Genetics:
Citt protein - Salmonella typhimurium (fragment)
C.Species: Salmonella typhimurium
C.Species: Salmonella typhimurium
C.Species: Salmonella typhimurium
C.Species: 30-Sep-1991 #sequence_revision 30-Sep-1991 #text_change 09-Jul-2004
C.Accession: PQ0098

H90130
60s ribosomal protein L1 [imported] - Guillardia theta nucleomorph
C;Species: nucleomorph Guillardia theta
C;Species: nucleomorph Guillardia theta
A;Note: a nucleomorph is the vestigial nucleus of a eukaryotic endosymbiont
C;Date: 10-May-2001 #sequence_revision 10-May-2001 #text_change 09-Uul-2004
C;Accession: H90130
